Other water measures tried

Thank you for your recent coverage of the long saga of Central Saanich residents as we seek to obtain safe and healthy drinking water for our homes in Senanus/Mount Newton neighbourhood. Councillor Zeb King is quoted as suggesting that the residents take a "different approach" rather than simply connecting ourselves to the region's water supply. We have drilled wells, collected rainwater and practise every water conservation approach that we can, but have reached the practical end of these alternatives

As a resident of the area, I want to emphasize that this issue has nothing to do with land development, but rather is about clean potable water. Canada is not a Third World country and every resident should have the basic right to safe water.
